Background: 

[Blank]

Objective: 

[Blank]

Methodology: 

[Blank]

Result: 

[Blank]

Conclusion: 

[Blank]

Keywords: [Blank]
INTRODUCTION

It should reflect the background, rationale and objectives. Do not exceed more than 500 words with pertinent references, usually in three paragraphs:

• First paragraph (what the research is about?) - discussing about the background on which the research work has been carried out explaining the national as well as international context.
• Second Paragraph (why this research has to be conducted?) – discussing about the rationale of your research work describing about the need of the study.
• Last paragraph – discussing about the objectives of the study.

METHODOLOGY

It should include all the details of materials and methods that are used to complete the study.

1. Research Method
2. Research Design
3. Study Duration/period
4. Study site and its Justification
5. Study Population
6. Sampling Unit
7. Sample Size & sample size calculation
8. Sampling Technique
9. Criteria for Sample Selection:
10. Data Collection Tools & Technique:
11. Data Management and Analysis
12. Statistical test and tools

The statement of ethical approval and the reference number of from the IRC/IRB or NHRC should be clearly mentioned.
RESULTS

It should contain what you found from your research work. The data from your research must be illustrated in tables and figure unless it is applicable. The tables and figures/graph should be present along with the main text not at the last of the text or with different files.

DISCUSSION

The result of the study must be interpreted here in discussion citing the recent researches in the literature. Disclose the limitation of your study at the end of your discussion.
CONCLUSION

The conclusion should reflect and elucidate how the results correspond to the study presented and provide a concise explanation of the allegation of the findings. Interpret your research findings in the conclusion rather than discussing it. It should be the theme extracted out from the result and supported by discussion. Be concise and specific in writing conclusion.

Don’t waste your time and space of the journal by writing the phrases like “We found that......”; “In conclusion...” etc. in conclusion.

Don’t repeat the data of your result in the conclusion. Instead you could interpret the theme of the findings of your research in the conclusion.

ACKNOWLEDGEMENTS

A short acknowledgement section can be written acknowledging the sources regarding sponsorship and financial support. Acknowledging the contributions of other colleagues who are not included in the authorship of this paper should also be added in this section. If there are no acknowledgements, then this section need not be mentioned in the paper.
REFERENCES

DOI is mandatory at the end of each references in this format:

https://doi.org/10.1186/s12884-020-02870-7

If you feel difficult to get DOI for each article, then follow these steps:
1. Open this link https://apps.crossref.org/SimpleTextQuery
2. One box will appear, copy your whole list of the references and paste it there.
3. Then, click on submit.
4. You will get all possible DOI
5. Copy the available hyperlinked DOI from each references and paste it at the end of the each references.

How to reformate the list of the references according to the Author guidelines of EJMS?

Guidelines for References Formatting:
1. The citation should be superscripted numerals without bracket after a full stop.
2. DOI is mandatory at the end of each reference in the reference list. The hyperlinked text (like [PubMed] [PM] [Google Scholar], [Full Text] whatever applicable) should be present at the end of each reference.

All the references should be formatted like this example.

Please, put the hyperlink for CrossRef, Google Scholar, PubMed, PMC, Full Text, and/or other whatever is applicable to each of reference listed in your reference list in this way [CrossRef] | [Google Scholar] | [PubMed].

If you are unaware of how to put the hyperlink (Blue Colored Text is a Hyperlink-Text, don’t confuse with it), the following tricks may help you.
1. Copy the web link or URL that you wish to hyperlink from the respective website of PubMed or PMC or Journal or Google Scholar.
2. Press “Ctrl + K”, then one pop-up window will appear.
3. Then, paste the copied web link or URL in the “Addresses” of the displayed box.
4. Click on “Browsed Pages” that is situated in the middle of the second column from the left.
5. Then, click “OK”.

If the link are not unavailable, provide the URL from where the article is downloaded or viewed and hyperlinked it as [Link].

If you feel difficult to get DOI for each article, click on this link https://apps.crossref.org/SimpleTextQuery Paste all of the references in the box and check the DOI and PMID box and click submit.

Link for full text means the web address of the journal where the specific article can be found.

Follow the punctuation marks carefully. Do not include unnecessary bibliographic elements such as issue number, month of publication, etc. Include names of six authors followed by et al if there are more than six authors.
5. Then, paste the copied web link or URL in the “Address” of the displayed box
6. Click on “Browsed Pages” that is located in the middle of the second column from the left
7. Then, click “OK”

If the link is not unavailable, provide the URL from where the article is downloaded or viewed and hyperlinked it as [Link]

If you feel difficult to get DOI for each article, click on this link https://apps.crossref.org/SimpleTextQuery

Paste all of the references in the box and check the DOI and PMID box and click submit.

Link for full text means the web address of the journal where the specific article can be found.

Follow the punctuation marks carefully. Do not include unnecessary bibliographic elements such as issue number, the month of publication, etc. Include the names of six authors followed by et al if there are more than six authors.
